Jean Constant: *Air*, digital image, courtesy Peterson Student Center Art Gallery

**Art Gallery, Peterson Student Center**

St. John’s College, 1160 Camino Cruz Blanca, 984-6199

Earth’s natural characteristics, and the ways in which they influence our environment, are the subject of *Elements: Earth Air Fire Water*, the latest exhibit at St. John's College. The show features Jean Constant’s fascinating, dimensional fantasy shapes; Ursula Freer’s gorgeous *Ancient Spring*, a psychedelic fantasy based on water flowing over rock; and Bill Maxon’s visceral sculpture *Cerro Grande*.

The exhibition is organized by Santa Fe’s 9-year-old Forum of Science and Art, a group that includes 35 artists working in sculpture, photography, painting, digital art, and performance art, and scientists working in various fields.

An opening reception is set for 5-8 p.m. Friday, April 14, and the show hangs through May 21.  — Paul Weideman
